

Case Study

Repurposed fallow wheat farms into solar farms. Helped wheat farmers pivot to solar farmers and continue generations of farming. Solar Collective led one of the first solar portfolios to be developed in the State of Washington.

Solar Collective:

- **Started greenfield development scope;** full ground up origination
- **Instrumental in writing new renewable policy in the state**
- **Ground up development.** Negotiated Interconnection and revenue contract with utility
- **Led environmental analysis** to determine the optimal placement for the solar footprint within the available land, so as to not disturb any potential wetlands/wildlife
- **Continue to own, grow, and guide development of this first of its kind portfolio**

Solar Farm Development, Washington State 160MW
